CLIMATE CHANGE ECONOMICS Website Launch

ClimateChangeEcon.net, a comprehensive website of resources and tools dedicated to addressing the carbon intensity of our economy and related climate change policy in the 50 states and territories, was launched in early December 2008. The web site's founder, Peter Meyer, director emeritus of CEPM and president of the E.P. Systems Group, Inc., aims to make ClimateChangeEcon.net the premier objective research tool for state and federal legislators, as well as regulators and policy analysts, on the economic opportunities presented by the fight against climate change.

By tapping into website's Legislators' Tools section, legislators across the country are able to access some tools to help dissect the assumptions that can distort research findings and provide these legislators a private forum for exchanging ideas with their peers. Apart from legislators, colleagues throughout the environmental community will find the site's public Web Resources and Library valuable for their own efforts.

ClimateChangeEcon.net welcomes new members and encourages anyone interested to join this online community by uploading your own resources for the benefit of others in the environmental field.
