

Using OpenURL in EndNote (Version X2)

1. Go to Edit → Preferences → URLs & Links
2. Click the “Enable OpenURL” checkbox
3. Enter the address of the UofL Libraries open URL resolver:

http://findit.library.louisville.edu:9003/sfx_local

*Note: if you will be using the OpenURL feature from off-campus, use this URL instead
http://echo.louisville.edu/login?URL=http://findit.library.louisville.edu:9003/sfx_local

4. Click the Apply button, then click the OK button.

5. Highlight a citation and go to References → URL → OpenURL link
6. The information from your citation should populate the fields of the FindIt@UofL Services Menu. If your data is not in the correct field in Endnote (for example the ISSN is in the Notes field rather than the ISSN field), FindIt@UofL may not be able to find your article. See the help on Editing Import Filters in order to fix this problem.
