

Jing Bryant

I was born and raised in Beijing, China, where I completed my undergraduate and medical school programs. I came to the USA for a better graduate education and earned a PhD in Physiology at University of Louisville, during which time I also found my better half. Louisville is a great city to live with events such as Thunder Over Louisville, Derby, and many more activities that a big city offers, without the traffic headache.

I chose to pursue a family medicine residency because of its broad practice spectrum which fits my interest in caring for and interacting with all kinds of patients. The Family Medicine program at University of Louisville offers exceptional training experience with fellowship opportunities that other programs may not have. I'm considering a fellowship in Geriatrics so that I can be a better primary care physician in taking care of the growing number of older adults. My hobbies include playing bridge, watching movies, and spending time with my family and friends.
