

CHEMICAL RECYCLING AT U OF L

Getting your department or group started:

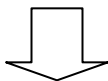

Types of Chemicals Accepted: Unopened and unused liquid and solid chemicals.

Not acceptable: Expired chemicals and products and spent waste. To request pick up of these items contact the Hazardous Waste Coordinator at 852-2956.

Step 1: Once you have determined that your lab does not need the unused, unopened chemical, inquire with others within your department to see if it can be used.

Step 2: If no one in your department can use the chemical, go to the DEHS web-link @ <http://louisville.edu/dehs/waste/disposal.html> to submit your chemical for recycling pick up. A DEHS waste container label is not required. Be sure to scroll down to the comments section and enter "Chemical(s) is offered for Chem Cycle Program."

Step 3: DEHS will process your request and come to your location and pick up the chemical(s) you have designated for recycling (usually within 2 weeks).

FREE CHEMICALS: University departments can view chemical items currently in the Chem Cycle program (link <http://louisville.edu/dehs/waste/redistribution.html>.) If you see a chemical on the list you can use, e-mail the Hazardous Waste Coordinator at cathy.price@louisville.edu and DEHS will deliver the chemical to your lab free of charge.

Questions or comments about this program can be directed to the U of L– Department of Environmental Health & Safety at 852-6670.
