NATIONAL ASSOCIATION FOR RESEARCH IN SCIENCE TEACHING

RIO GRANDE, PUERTO RICO
APRIL 2013

Project supported by
National Science Foundation
SIGNIFICANCE AND PURPOSE

Significance: Develop approach to strengthen undergrad STEM student retention

Study Purpose: To examine the development of undergraduate teaching assistants (UTAs) who were prepared and supported as learning assistants in introductory STEM courses
FACTORS THAT IMPACT STEM STUDENT RETENTION

• First year or gateway experiences
• Hierarchical nature of STEM programs
• Student achievement
• Learning environment
STRUCTURES NEEDED FOR CHANGE

• One aspect of pedagogy or curriculum;
• An extended period of time;
• Performance evaluations and feedback to the participants in the program;
• Practice of new concepts and skills and reflection on practice;
• Flexible solutions aligned with cultural and organizational norms.
CONCEPTUAL FRAMEWORK

Effective Peer Learning Assistance by UTAs

Hypothesis: Leads to higher...

Academic Achievement by Undergraduate Students

Hypothesis: Leads to stronger...

STEM Identity by Undergraduate Students

Study targets portion inside dotted lines

Training, Support & Practice for UTAs

Results in

THEORETICAL FOUNDATION: VYGOTSKY ZPD & MKO
UNDERGRADUATE TEACHING ASSISTANT PROGRAMS

Carefully selected undergrad STEM majors act as learning assistants for less experienced students

- Small cooperative learning groups
- Support available to all students to avoid stigma
- Faculty mentoring and support of UTAs
- Learning benefits for both UTAs and students
- UTAs have visible role as learning assistants but not overburdened with teaching new material or grading duties
SOLUTION APPROACH
INCORPORATING LITERATURE EVIDENCE

Program for Retention Improvement in Mathematics, Engineering, and Science (PRIMES)

- NSF DUE STEP 5 year program
- Selected UTAs specially trained and supported to serve as effective peer learning assistants and facilitate a positive learning environment
- Small learning group context decided by department
- Cross-college collaboration between science, mathematics, engineering, and education departments
1. What peer learning assistant skills did the UTAs consider to be most important for being an effective UTA?

2. In what ways did UTA peer learning assistant skills change over the course of the semester?

3. In what ways did the UTAs’ recognize deepening of content knowledge and/or self-learning approaches as a result of their experience?
METHODOLOGY

• Research Design Elements
  • Single, non-comparison group with retrospective post-treatment data collection
  • Quantitative and qualitative data collected near end of semester experience
  • Likert-item survey and open-ended guided reflection

• Sample
  • 112 UTAs over 2 semesters (Spring and Fall 2012) from 9 STEM departments
  • GPA > 3.0, teaching interest statement, and faculty recommendation
TREATMENT

- Content Knowledge Support (STEM faculty)
  - Content unpacking
  - Awareness of common misconceptions
- Pedagogical Training (Education Faculty)
  - Questioning practice
  - Metacognition
  - Formative assessment
  - Active learning strategies
- Structure
  - 3-day workshop prior to semester
  - Bi-monthly seminars and reflections
  - Stipend and course credit
INSTRUMENTS

- UTA Experience Survey
  - 21 Likert-type items (5 = strongly agree to 1 = strongly disagree) with 87% response rate, completed last seminar
  - 10 items were determined to address research questions
  - Adapted from previously published peer leader survey (Hug, Thiry, & Tedford, 2011)

- UTA End of Semester Reflection
  - Structured written reflection protocol of ten open-ended prompts relating to UTA experience (88% response rate)
  - Submitted online before last seminar
  - 6 prompts aligned with research questions
DATA ANALYSIS

• UTA Experience Survey
  • Principal components analysis
  • Varimax rotation with Kaiser Normalization
  • Kaiser criterion (eigenvalues >1) to determine number of components to retain
  • Scree plot evaluated
  • A measure (on a 1-5 scale) of UTA self-rating on the retained components was calculated by applying the means for each item with the weighting of each item per component.
DATA ANALYSIS

• UTA End of Semester Reflection
  • Random stratified sample independently read and analyzed by two researchers
  • Identified and categorized all statements relevant to research questions
  • Researchers agreed on 82% of identification and categorizations
  • Reconciled differences and established consensus on explicit criteria for identification and categorization
  • Split remaining reflections and categorized statements independently
  • Descriptive labels were developed and assigned to capture inferred or explicit meaning
## RESULTS

DISCUSSION
RESEARCH QUESTION 1
IMPORTANT STEM TEACHING SKILLS

Vygotsky’s ZPD
- Engaging style
- Clear, realistic examples
- Knowing the content at an appropriate depth
- Adapt teaching to students’ needs

Vygotsky’s MKO
- Patience
- Ability to build rapport
- Interacting with learners in enthusiastic and appropriate ways
 discusses the multiple data sources, the UTAs strongly reported improvement in their own teaching skills.

- Weighted means for Teaching Skills and Teaching Self-Efficacy factors were above 4 (“agree”)
- Key skills Improvement mentioned by UTAs
  - Public speaking
  - Clear explanations
  - Questioning
  - Pedagogical strategies emphasized in seminar
DISCUSSION
RESEARCH QUESTION 3
RECOGNIZING DEEPENING OF LEARNING

- Content knowledge deepened
  - Current coursework
  - Professional preparation and testing

- Self-learning approaches
  - Process of learning
  - Identification with faculty
CONCLUSIONS

• UTAs recognized importance of strong content knowledge, but collectively put other skills higher (engaging teaching, patience, develop rapport)
• UTAs were very focused on the learning of their students rather then on demonstrating their own mastery of content knowledge
• Most universally-noted change was on UTAs own content knowledge depth and self-learning
• UTAs did not recognize “increased” content knowledge but did recognize deepened content knowledge
• Step 1 of Conceptual Framework appears successful – next step is to seek evidence of impact on students
