

Study of Emotions for Children with ADHD

- We are looking for children who:
 - Have been diagnosed with ADD or ADHD *or*
 - Have not been tested for ADD/ADHD, but have problems paying attention, fidgeting, being hyperactive, or being easily distracted
- To participate, children must be between the ages of **7 to 11**

Why should my child participate?

- This study examines emotions of children with ADD/ADHD. As a part of the study, children will receive a **free** evaluation for ADHD and **brief IQ and academic achievement test**
 - **Results will be provided to parents *free of charge***

What will I be asked to do?

- Parents and children will come to University of Louisville for a 2 sessions, including:
 - A 3 hour session where parents will complete questionnaires and answer questions about the child's mood and behavior and the child will receive brief IQ and achievement testing
 - A 2 hour session where the child's heart rate will be monitored while they complete games and activities
- Parents will keep track of the child's mood at home for 1 week.
- Families can receive up to **\$40** for participating.

How do I get more information?

- Contact Dr. Paul J. Rosen, Ph.D. at the RACER Lab at U of L
- **Phone: (502) 852-1387; Email: uoflracerlab@gmail.com**
