

## GENERAL DATA PROTECTION REGULATION (GDPR): COMMON APPLICATIONS FOR US RESEARCHERS

OCT 9, 10-11:30 AM Med CTR One, IRB Conference Room  
OR

OCT 11, 3:30-5 PM, Jouett Hall Anna Mae Tobbe Conf. Rm

This free and open webinar will provide information on the General Data Protection Regulation that was effective May 25, 2018. The law has a broad extra-territorial reach, but determining its application to research conducted at, or supported by, U.S. universities and academic medical centers can be challenging. In this AAHRPP presented webinar, the speakers will address several scenarios in which the GDPR affects research conducted at U.S. universities and academic medical centers. At the conclusion of this webinar, participants will be able to:

- Appreciate the jurisdictional reach of the GDPR
- Understand how to analyze when a specific research study is subject to the GDPR
- Appreciate the differences between U.S. regulatory regimes (e.g., the Common Rule and HIPAA) and the GDPR
- Have a sense of common approaches adopted by U.S. institutional review boards to address GDPR requirements
- Understand strategies for negotiating with clinical trial sponsors and sites located in the European Union

Hosted by Research Integrity Program and Human Subjects Protection Program Office
