Policies and Procedures

Use of Tissue and Tissue Sharing

**Policy:** Use of tissues that are acquired from animals not originating from a Principal Investigator’s approved *Proposal to Use Animals in Research and Teaching* (“Animal Proposal”), such as from other laboratories or abattoirs, requires an approved “*Proposal to Use Fresh or Frozen Tissue in Research and Teaching* (“Tissue Proposal”). PI’s with current IACUC-approval for a given species, however, are exempt from this requirement.

**Rationale:** Principal Investigators are encouraged to maximize use of tissues collected from live animals as approved in an IACUC-approved “*Animal Proposal,”’ and tissue collected following euthanasia of animals assigned to the PI’s *Animal Proposal*. However, use of animal tissue from other sources raises biological security and occupational health/safety issues that require oversight.

**Procedures, Guidelines, and Exceptions:**
1. As a means of reducing overall animal usage, the IACUC encourages investigators to share animal tissues except where specifically prohibited by the terms of a grant or contract. Investigators should list shared tissue as a “Tissue Source” on the IACUC *Proposal to Use Fresh or Frozen Tissue in Research and Teaching*.

2. This does *NOT* authorize transfer of live animals from one project to another; animals must undergo euthanasia according to, and by personnel listed on, the “donor’s” IACUC-approved *Proposal*.

3. In some cases, specific grants or contracts may require a letter of understanding that tissues from one project may be transferred to a second project (see also UofL “Ethics Document,” available from the Office of the Executive Vice President for Research and Innovation).
