

October 2017 Cyber Security Awareness

Learn How to Protect Internet Based Devices:

- Read our [Internet of Things Tip Card](#) and share this info with others.
- Promote stronger authentication and the [Lock Down Your Login](#) campaign within your office and at home.
- Our partners over at the Center for Internet Security have recently published a newsletter entitled [Connected Home Devices: The Internet of Things](#). This resource explains how the Internet of Things works, the history behind IoT (internet of things), and what you should keep in mind when connecting your devices.

The “internet of things” brings many benefits & risks, educate yourself so that you can keep your information safe.

Encourage others in your office to attend security awareness training sessions.
