

'Invalid protocol' error

Why do I get an "Invalid protocol" error message in RealPlayer?

RealPlayer can open web addresses (URLs) that start with **rtsp://**, **pnm://**, or **http://**. If you try to connect to a different type of URL, you may get this error message:

Invalid protocol specified in URL. URLs should typically start with "rtsp://", "pnm://", or "http://"

If you received this error message, check if you typed the URL correctly, and try it again. If you clicked on a link, go back to the source to verify the URL.
