Executive Summary

Introduction

Human trafficking (see Key Definitions, page 4) is the fastest growing criminal industry in the world today\(^1\) generating $9.5 billion yearly in the United States\(^2\). Mirroring the national situation, child trafficking specifically is prevalent and posing a serious problem in Kentucky. Trafficking cases have been identified in both rural and urban areas across the state and represent both sex and labor trafficking (see Key Definitions, page 4). Though Kentucky successfully passed the Safe Harbor law in 2013, no residential treatment facilities, alternative housing options, or treatment programs exist in Kentucky specifically for children who have been trafficked, leaving caseworkers with very few options for treatment and placement of some of the state’s most vulnerable and traumatized youth. As a result, gaps identified in Kentucky related to child trafficking include: (1) Limited awareness of the problem, features of child trafficking, and services for victims by child welfare personnel; (2) Lack of a trauma-informed, child-focused response including multi-system information, coordination, and advocacy, especially related to the identification and engagement of trafficking victims; and (3) Limited targeted services available for child trafficking victims and for prevention against sex trafficking.

Project PIVOT

Project PIVOT (Prevention and Intervention for Victims of Trafficking) is a research study with the aims of increasing awareness of the issue of child trafficking in Kentucky and improving the ability of systems to appropriately and effectively respond to child trafficking victims in a manner which limits additional trauma to the child victim.
Executive Summary

Takeaways

To fulfill Aim 1: Comprehensive Case Review, the Project PIVOT research team analyzed data from 698 reported cases of alleged child trafficking in Kentucky. Trends identified included: a) Law enforcement involvement in more recent cases than in previously reported cases; and b) A greater likelihood for professionals to report child trafficking cases than law enforcement and school staff in more recent cases than in previously reported cases. Additionally, an alarming majority of the alleged child victims were reportedly trafficked by a family member and were often at home when these allegations were received. Further, cases were more likely to be substantiated and/or founded when law enforcement was involved, a forensic interview was conducted, and when cases involved drugs. Reflecting previous literature, factors related to an alleged child victim having multiple perpetrators were having a family member facilitating trafficking, being young, and drugs being involved.

Based on 14 states interviewed for Aim 2: Child Trafficking Screening and Identification Tools (CTSIT), all but one had screening protocols in place for identifying potential victims of trafficking. Task forces, work groups, and advisory councils were often formed to give input and recommendations on the decision-making of screening tools. Common experiences in challenges to implementing screening tools included the length of the tool, maintaining training of reporters throughout the state, a lack of inclusive language, and unpredictability as a result of inconsistent reporting. Implications for developing a CTSIT protocol for at-risk youth in Kentucky are discussed.

For Aim 3: Trafficking Policy Advisory Consortium (TPAC), work group meetings with the Kentucky Statewide Human Trafficking Task Force (SHTTF) were conducted to brainstorm ideas for effective cross-agency communication and collaborate on policy and practice recommendations for ending child trafficking.

Recommendations

The research conducted by Project PIVOT regarding child trafficking victims in Kentucky further supported the findings from previous literature and serves as a call to action to our community and our State. The statistics are alarming, however, hope remains. Key recommendations include: 1) Develop and implement a standardized trauma-informed training across all professionals and community members involved in ending child trafficking in Kentucky; 2) Implement an Information Sharing System for the Multidisciplinary Team (MDT); 3) Create an identification process and offer resources that are inclusive of overlooked populations (e.g. male victims, LGBTQ+ victims, victims in rural areas). Together, we can create a compassionate and safe community free from human trafficking. Education and building awareness in our community coupled with systems change are key, and will make us all warriors in the fight against human trafficking.
Human Trafficking
Using force, fraud, or coercion to obtain commercial sex acts or other labor or services; When the type of trafficking is commercial sex, and the victim is under 18, no force, fraud, or coercion need be shown.³

Labor Trafficking—Labor or services, through the use of force, fraud, coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery

Sex Trafficking—The purpose of a commercial sex act induced by force, fraud, or coercion⁴

Commercial Sexual Exploitation of Children (CSEC)
A range of crimes and activities involving the sexual abuse or exploitation of a child for the financial benefit of any person, or in exchange for anything of value given or received by any person⁵

Substantiated Cases—Cases confirmed by a DCBS investigation

Founded Cases—Cases confirmed by a law enforcement investigation

Child Trafficking
Includes commercial sexual exploitation, domestic, sex trafficking, and labor trafficking of minors

Family Controlled Trafficking
Encompasses the wider range of experiences of human trafficking survivors whose families were involved in their exploitation⁶
Introduction to Project PIVOT
Why is this project important?

Background

The Kentucky child welfare system currently provides limited human trafficking training to staff and has no standardized screening and/or assessment tools to assist with identifying trafficked children in their system once a report is made. In addition, while Kentucky successfully passed the Safe Harbor law in 2013, no residential treatment facilities, alternative housing options, or treatment programs exist in Kentucky specifically for children who have been trafficked, leaving caseworkers with very few options for treatment and placement of some of the state’s most vulnerable and traumatized youth.

This had led to the following child welfare specific service-system gaps being identified in Kentucky related to child trafficking including:

- limited awareness of the problem, features of child trafficking, and services for victims by child welfare personnel
- lack of a trauma-informed, child-focused response including multi-system information, coordination, and advocacy—related to the identification and engagement of trafficking victims
- limited targeted services available for child trafficking victims and for prevention against sex trafficking

This study, Prevention and Intervention of Victims of Trafficking in Kentucky (PIVOT-KY, aka “PIVOT”) utilizes strategies and research activities to better understand, and ultimately address these coordination and service gaps in order to improve the handling of child exploitation and trafficking cases in a manner that limits additional trauma to the victim and better meet the needs of child welfare involved children who have experienced, or are at risk of, trafficking in Kentucky.
What do we already know about human trafficking?

** Trafficking in the United States**

Human trafficking is the fastest growing criminal industry in the world today\(^1\) generating $9.5 billion yearly in the United States\(^2\).

- 83% of all confirmed human trafficking cases in the United States involve American born citizens\(^7\)
- The average age of entry into commercial sexual exploitation is 13 years\(^9,10\)
- 98% of sex trafficking victims are women and girls\(^7\)
- Many victims tend to come from vulnerable populations with a serious history of previous abuse\(^14\)
- 1 in 7 children receive an online solicitation or approach\(^11\)

** Risk factors increasing youths' vulnerability to trafficking include:**
- sex or physical abuse & running away or being homeless\(^8\)
- being LGBTQ, substance abuse, poverty, and early adverse experiences\(^13,15\)

** Other risk factors:**
- system-involvement (e.g. juvenile justice, child welfare systems),\(^13,15\)

What puts Kentucky at risk for child trafficking?

Risk Factors

Kentucky (KY) consists of 120 counties and nine Department for Community Based Services (DCBS) child welfare regions. According to the 2015 United States Census population estimates, KY has a total population of 4,425,092 (88.3% Caucasian, 8.2% African-American, 3.4% Hispanic or Latino, 1.4% Asian and American Indian 0.3%)16. 2,219 refugee children were resettled in KY between 10/2013 and 9/201517. The percentage of minors under 18 years of age is 22.9%. Kentucky (KY) is home to 1,014,004 children18 and has the nation’s highest rate of student homelessness19, with 41% of KY children living in high-poverty communities18. The number of homeless students in KY has nearly doubled in less than six years, reaching a high of more than 35,000 students in the 2011-12 school year19. Jefferson County, home to 172,526 children, accounts for the highest number of homeless students and has a child poverty rate of 26%18. Over 12,700 KY children were in foster care due to abuse or neglect in 201318.

Mirroring the national situation, child trafficking is a serious problem in Kentucky

Trafficking cases have been identified in rural and urban areas across the state, representing both sex and labor trafficking.

Sex trafficking comprised 98% of all child trafficking cases in KY in 2017, 2% labor trafficking, and 3% both labor and sex20.

Child victims have been identified in all 15 Area Development Districts, representing many different counties throughout the state.

Since human trafficking reporting in KY, there have been 582 reported incidents of child trafficking involving 698 alleged victims20.

The data indicates a 443% increase in reported incidents over the past five years20.
What puts Kentucky at risk for child trafficking?

**Current Research**

A recent study\(^{21}\) was conducted by the University of Louisville Human Trafficking Research Initiative to investigate the prevalence rate of sex trafficking among 132 homelessness youth aged 12-25 in the Kentuckiana region of the state. Results indicated a 42% prevalence rate, with one in two girls and one in three boys reporting sex trafficking victimization. The average age of reported entry into sex trafficking was approximately 16 years old, and over three quarters of the sample reported currently being trafficked at the time of the survey.

Middleton et al.\(^{22}\) also found that 48% of youth who reported being sex trafficked had Adverse Childhood Experiences (ACEs) scores of 7 or more. The ACEs that were found to be predictors of sex trafficking included: Experiencing emotional abuse, sexual abuse, emotional neglect, physical neglect, and witnessing domestic abuse. Among 128 youth (aged 12-25) experiencing homelessness in the Kentuckiana region, Frey et al.\(^{23}\) found that 53% of the sample reported experiencing suicidal ideation and 84.4% of those who reported experiencing suicidal ideation reported that they had attempted suicide in their lifetime. Additionally, the odds of a youth experiencing homelessness who had experienced sex trafficking reporting suicidal ideation was 3.87 times higher than youth experiencing homelessness who had not experienced sex trafficking.

Many Kentucky youth are at high-risk for trafficking in part due to the abovementioned high rates of homelessness, child maltreatment, system-involvement, and poverty that exist in the state. This high-risk nature is also due to the fact that a family member is often the perpetrator of such crimes when they trade or sell a child for drugs and/or money, as is the case where approximately 60% of cases involved family members\(^{20,24}\).

Although Kentucky is not a border state or a major entry point into the US, it faces a severe problem of labor and sex trafficking in small towns and urban areas across the Commonwealth. Crisscrossed by multiple interstates, including I-65, I-75, I-64 and I-71, Kentucky is host to a number of high-profile events, including the Kentucky Derby and NCAA Basketball Championship, which increase traffic in the commercial sex market and lead to increased trafficking of adults and youth for labor and sex. Kentucky’s high rates of poverty, child maltreatment and the drug epidemic have led to increased vulnerability of youth being trafficked by both parents/caretakers and acquaintances/pimps in all 15 area development districts across Kentucky.

**The Impact of Trafficking on Child Victims**

Child trafficking (see Key Definitions, page 4) results in high rates of posttraumatic stress disorder, depression, suicidal ideation, drug addiction, and a multitude of somatic symptoms among the victims\(^{21,25}\). Specifically, most victims experience symptoms of complex trauma, resulting from events that include entrapment; relocation; exposure to the abuse of others; and extended physical, sexual, psychological abuse\(^{26}\). Trafficked youth are also at increased risk for suicide\(^{27,28}\), which is likely exacerbated by the difficulty in accessing these youth in order to ensure accurate clinical assessment and prompt follow-up care\(^{29}\).
The Kentucky General Assembly passed the Human Trafficking Victims Rights Act (HTVRA) to strengthen penalties for traffickers and set up a safe harbor and pathway to services for child victims.

In response to the HTVRA, the Kentucky Statewide Human Trafficking Task Force (SHTTF) was created to assist in implementation of the HTVRA, improve collaboration between federal, state and local law enforcement and other professionals.

The Department of Juvenile Justice (DJJ) began screening for human trafficking in late 2015.

The Office for the Attorney General received a federal grant in 2016 to address human trafficking, hire a specially-trained human trafficking investigator, Ricky Lynn, and provide trainings by Allyson Cox Taylor on how to recognize and report human trafficking.

From July 2015 to April 2016, the DJJ identified 236 youth who scored positive on the screeners for human trafficking, indicating a higher number of youth victims than were reported to DCBS during that same time period.

According to DCBS, in 2017, reports of trafficking and identification of victims have been steadily on the rise; there have been 582 reported incidents of child trafficking involving 698 alleged victims.

**Timeline of events related to child trafficking in Kentucky**

**2013**
- The Kentucky General Assembly passed the Human Trafficking Victims Rights Act (HTVRA) to strengthen penalties for traffickers and set up a safe harbor and pathway to services for child victims.

**2013**
- In response to the HTVRA, the Kentucky Statewide Human Trafficking Task Force (SHTTF) was created to assist in implementation of the HTVRA, improve collaboration between federal, state and local law enforcement and other professionals.

**2015**
- The Department of Juvenile Justice (DJJ) began screening for human trafficking in late 2015.

**2016**
- The Office for the Attorney General received a federal grant in 2016 to address human trafficking, hire a specially-trained human trafficking investigator, Ricky Lynn, and provide trainings by Allyson Cox Taylor on how to recognize and report human trafficking.

**2016**
- From July 2015 to April 2016, the DJJ identified 236 youth who scored positive on the screeners for human trafficking, indicating a higher number of youth victims than were reported to DCBS during that same time period.

**2017**
- According to DCBS, in 2017, reports of trafficking and identification of victims have been steadily on the rise; there have been 582 reported incidents of child trafficking involving 698 alleged victims.

**Systemic Gaps and Challenges**

Despite the progress made in Kentucky over the last ten years, significant, systemic gaps exist in addressing the problem of child trafficking. These include a lack of data sharing, which impacts effective investigations and prosecutions. For instance, inconsistencies exist between numbers of reported youth victims screened by Department of Juvenile Justice (DJJ) and those identified by DCBS in their report. Numbers also differ between victims served and cases charged and prosecuted although some of the variances may exist due to lack of prosecution or unwillingness/inability of the victim to move forward with a criminal case. There is also a lack of specialized training for all law enforcement and prosecutors. Although the recently passed HTVRA now mandates training for law enforcement, prosecutors and victim advocates on human trafficking, there is still an absence of law enforcement officers able to train on human trafficking, as well as a lack of training materials and online resources to address the specific skills of investigating and prosecuting human trafficking. Additionally, law enforcement lacks an established protocol and procedure on responding to human trafficking cases, likely negatively impacting the number of identified cases, and the number of victims given access to services.

Additionally, the discrepancy between these reported numbers highlights multiple challenges including; lack of training regarding proper use of evidence-based screening and identification tools, lack of awareness about the issue, as well as a lack of awareness or reluctance of many exploited children to identify themselves as victims.

(30) 582 reported incidents
(31) 698 alleged victims
(32) 2017, reports of trafficking and identification of victims have been steadily on the rise;
What is Project PIVOT?

Description of Research Plan/Intervention PIVOT:

A New Anti-Trafficking Consortium in Kentucky: Prevention and Intervention of Victims of Trafficking in Kentucky (PIVOT) represents a new partnership (consortium) among the Kentucky Department for Community Based Services (DCBS), University of Louisville, and many others including the I AM Project, Kentucky Association of Sexual Assault Programs, the Kentucky Attorney General’s Office, Kentucky Association of Children’s Advocacy Centers and the Catholic Charities Human Trafficking Program to name just a few. The consortium, developed in January 2019, partnered to improve the state’s ability to identify child welfare-involved trafficking victims in Kentucky and to promote safety, permanency, and well-being outcomes for children who have been the victims of trafficking by:

1. Ascertain potential gaps, systemic issues and opportunities for enhanced training,
2. Partnering with other states with established and validated screening and identification tools,
3. Integrating trafficking-specific screening items into existing DCBS screening and assessment tools,
4. Creating and promoting partnerships throughout the system of care in Kentucky, and
5. Evaluating all outcome focused objectives, evidence of project impact and success, and contributions to knowledge base.
Who is the PIVOT Team?

From left to right: DCBS Branch Manager, Lucie Estill; Social Service Specialist with the Child Protection Branch, Tara Cecil; Attorney General Andy Beshear; Director of the University of Louisville’s Human Trafficking Research Initiative, Jennifer Middleton; Director of the Office of Child Abuse and Human Trafficking Prevention and Prosecution, Allyson Cox Taylor; Project PIVOT Research Assistant, Emily Edwards; Project PIVOT Research Assistant, Rianna Ayala; and Director of the Kentucky Statewide Human Trafficking Task Force, Mandy Otis
What are the goals of Project PIVOT?

**Goals and Objectives**

The overall goal of Project PIVOT is two-fold:
1) To increase awareness of the issue of human trafficking within the child welfare population; and
2) To improve the ability of systems to appropriately and effectively respond to human trafficking within the child welfare population, in a manner which limits additional trauma to the child victim. Project PIVOT, funded by a $100,000 grant from the Kentucky Children’s Justice Act Task Force, focused on three aims:

1. **Conduct a comprehensive case review** of the 698 alleged child trafficking cases reported to DCBS from 2013-2018 to answer the primary question: *What happens to child trafficking cases in the child welfare system?*

2. **Conduct research on child trafficking screening and identification tools (CTSIT)** to inform the development of child trafficking screening and identification protocols for at-risk youth in Kentucky.

3. **Develop and implement a Trafficking Policy Advisory Consortium (TPAC)** to enhance cross-agency interactions, facilitate better communication related to child trafficking cases, and work collaboratively to close gaps in services for child trafficking victims.
Aims of Project PIVOT

Aim 1: The first was to answer the question: What happens to child trafficking cases in the child welfare system? To answer this question, the PIVOT team conducted a comprehensive case review of 698 child trafficking cases reported to the Department of Community Based Services (DCBS) between 2013 and 2018. The comprehensive case review will inform the stated activities of the project and help to describe child welfare practice pertaining to child trafficking cases. The results of the comprehensive case review will be used to ascertain gaps, systemic issues, and opportunities for enhanced education, training, and policy development.

Aim 2: The second objective answered the question: What is the best approach for screening and identifying potential victims of child trafficking? The PIVOT team developed a child trafficking screening and identification protocol for at-risk youth in Kentucky by reviewing literature regarding risk factors for child trafficking, reviewing existing child trafficking screening and identification tools (CTSIT), and interviewing child welfare experts in states across the country. Upon completion of the project, findings and recommendations of the TPAC were shared with key legislators, the Office of the Governor, and the Commissioners, as well as stakeholders.

Aim 3: The third objective answered the question: What is the best way to respond to child trafficking victims in a manner which limits additional trauma to the child victim? To assist with this question, the PIVOT team developed the Trafficking Policy Advisory Consortium (TPAC) which included University of Louisville’s Human Trafficking Research Initiative, the Kentucky Office of the Attorney General, and the Kentucky DCBS. The TPAC worked collaboratively to enhance cross-agency interactions, facilitate better communication related to child trafficking cases, and close gaps in services for child trafficking victims.
Methods
Participants

The comprehensive case review was conducted during a six-month period (months 2-8 of the project) and included a review of the existing 698 reported cases in 2013-2018 involving alleged victims of human trafficking within the DCBS system. The comprehensive case review informed the stated activities of the project and help to describe child welfare practice pertaining to child trafficking cases. The results of the comprehensive case review will be used to ascertain gaps, systemic issues, and opportunities for enhanced education, training, and policy development. See Figure 1 for descriptive statistics on the substantiated and/or founded alleged child victims.

Procedures

The PIVOT Research and Evaluation Team (RET), led by Dr. Jennifer Middleton, worked with DCBS to obtain a data sharing agreement. The RET worked closely with DCBS, the Attorney General’s Office, and project consultants to design a data extraction tool to be used to collect all pertinent information and variables for the case file review. The research literature on typical characteristics of child trafficking victims informed the data elements to be included in the data extraction from the DCBS caseworker intake assessment form (aka: ADT CPS Assessment for Abuse/Neglect form).

To assess the well-being of children reported as possible child trafficking victims over time, DCBS provided the RET with the unique ID, which was used to match data to the Child and Adolescent Needs and Strengths (CANS) data that is conducted by behavioral health providers for all children in out of home care who screen positive for trauma and behavioral health needs as they enter care. All children who meet a threshold with the CANS are then referred to treatment. While they remain in treatment it is expected that a CANS will be completed every 90 days. For this project, the first and most recent CANS data will be analyzed for all child trafficking cases reported during the study period of this proposed project.

Further, findings were used to identify trends, as well as contextualize the specific experiences of trafficked youth involved in the Kentucky child welfare system in order to better inform best practice and future training opportunities, and to create services that best fit the victims’ needs. The primary goals of this task were: 1) to determine the incidence rate of child sex and labor trafficking within the Kentucky child welfare system from 2013 to 2017, 2) to use findings to clearly articulate best practices, enhance training for child welfare professionals, and create trauma-informed, victim-centered services, and 3) improve current sex and labor trafficking identification practices within DCBS by integrating new trafficking-specific screening items into existing screening and assessment practices.

</tbody>
</table>
Participants

Child welfare leaders and experts from across the United States were invited via email and phone to be interviewed on the following questions:

- What identification and screening tools does your state/agency use to identify potential child trafficking victims?
- How did your state/agency decide on the current CTSIT being used? Who had input?
- How was your selected CTSIT developed? Have you experienced any challenges or barriers to implementing it? If so, what were they? Can you send us a copy of your CTSIT to review?
- Is the juvenile justice system in your state using a CTIST? If so, tell me about it. Can you get a copy of it for us to review and/or put me in touch with your JJ person?
- Do you have contacts for child welfare leaders/experts in other states/agencies that can answer these questions as well?

Procedures

A literature review was first conducted regarding risk factors for child trafficking as well as screening and identification tools currently utilized in the United States to identify victims of child trafficking. Next, the PIVOT team conducted interviews with child welfare leaders, youth service providers, and researchers in other states in order to gather information about current practices pertaining to CTSIT.

Upon data collection on risk factors and CTSIT in the United States, the PIVOT team worked with the Investigations/Law Enforcement Working Group of the Kentucky SHTTF to pilot test and evaluate a novel approach to identifying potential child victims of trafficking via a new case tracking and reporting system based on Missing Children Reports. Data were compiled into a report, including a table of selected tools, and presented to the TPAC members for input, prioritization, and ranking. Recommendations from TPAC for best practice regarding screening and identification of potential victims of child trafficking in Kentucky were collected.
**Participants**

Members of the SHTTF were invited to participate in a survey and two focus groups during two of the meetings. Members were over 18-years of age and served as professionals and community members on the task force.

**Most members were female (63%), white (81.5%), and members of the SHTTF (85.2%)**

The average age was 41 years old

Members spent an average of 18.3 years in their community

Members spent an average of 2.3 years in the SHTTF

**Procedures**

The new workgroup developed was called the Trafficking Policy Advisory Council (TPAC), and met in Frankfort, KY, to facilitate in creating the opportunity to develop cross-agency routine consultation opportunities. The TPAC meetings included the following agenda: a) review of a closed child trafficking case (presented by a DCBS worker, masked to prevent violation of confidentiality), b) discussions of any cases that were being shared among service providers that are complex and require staffing, data sharing or collaboration on decision making, c) service provider update and collaboration discussion, and d) an update on child trafficking research (prevention, identification and treatment) to assist the group to serve trafficked youth in child welfare care with the most up to date, evidence-based information. The group collaboration was evaluated using the following:

- Demographics
- Seven Commitments Survey
- Coalition Web-Based Self-Report Questionnaire
- Brainstorming Session
- Focus Groups
Results
The dataset included 29 questions answered by reporters. In addition to specific questions asked when making reports, each case had an open-ended question for additional comments and brief allegations. Informed by previous research on risk factors along with reviewing a random sample of 30 of these additional notes, the RET developed a Qualitative Coding Extraction Tool to analyze the total sample of 698 case additional notes. The most common themes mentioned in additional notes were the following:

Sex was used for money (46%) and drugs (32.8%), 76.1% of exploitation experienced by alleged child victims was prostitution, 15.9% of alleged child victim cases mentioned sexual abuse at some point in the child’s history. Further, in 31% of cases, perpetrators had multiple victims and technology was reportedly involved in 8.5% of alleged child victim cases.

**Gender differences and running away**

Children who were reported in additional notes to have run away or be missing at some point in their history consisted of 19.3%. Compared to the variable of running away and/or missing, the RET found that the probability of the alleged child victim running away or going missing was 8.4 times more likely for females than males (see Table 1).

**Table 1. Number of respondents with mention of running away or being missing in case notes (n = 693)**

Substantiated and/or Founded

Cases involving a family member (n = 95) resulted in being substantiated, cases involving a non-family member (n = 141) resulted in being founded, and cases involving both a family member and non-family member (n = 26) resulted in being both substantiated and founded. Thus, the RET created one variable that accounted for all cases (n = 210) confirmed either by law enforcement investigation (founded) and/or by a DCBS investigation (substantiated). The odds of a case being substantiated and/or founded were related to law enforcement involvement, whether a forensic interview was conducted, and if drugs were involved (see Table 3).

Table 3. Number of cases substantiated and/or founded by whether law enforcement was involved, a forensic interview was conducted, and if drugs were involved

| Variables                  | Substantiated and/or Founded | | | | | |
|---------------------------|-----------------------------|---|---|---|---|
|                          | No  | Yes | n  | $\chi^2$ | $p$ | $\Phi$ | OR  |
| Law Enforcement           | 420 | 203 | 698 | 17.205 | .000 | .106  | 4.66 |
| Forensic Interview        | 236 | 150 | 698 | 31.61  | .000 | .213  | 2.73 |
| Drug Involvement          | 174 | 96  | 600 | 6.767  | .009 | .106  | 1.60 |

The probability of a perpetrator having multiple victims was 4.15 times greater for perpetrators who were family members than for perpetrators who were not family members (see Table 4). Further, children trafficked by a family member were significantly younger than those trafficked by a non-family member and children who were trafficked by a family member were more likely to have more perpetrators than children trafficked by a non-family member (see Table 5).

Table 4. Number of cases involving a perpetrator with multiple victims by whether the perpetrator was a family member or not (n = 465)

| Family Member as a Perpetrator | Perpetrator with Multiple Victims | | | | | |
|-------------------------------|----------------------------------|---|---|---|---|
|                               | No    | Yes   | $\chi^2$ | $p$ | $\Phi$ | OR  |
| Yes                           | 30    | 125   | 7.295     | .007| .125 | 4.15 |
| No                            | 32    | 278   |           |     |       |     |

Family Controlled Trafficking (for definition, see page 4)

The RET condensed the caretaker’s relationship to the victim variable into the question, “Was the perpetrator a family member?,” which resulted in two outcomes: Nonrelative, encompassing all relationships of perpetrators not biologically related to the alleged child victim; and Family Member, encompassing biological relationships including aunt, uncle, brother, father, mother, grandmother, grandfather, and sister.

Table 5. Results of t-test and Descriptive Statistics for number of perpetrators and age of alleged child victim by having a family member as a perpetrator

| Variables | Family Member as a Perpetrator | | | | | |
|-----------|--------------------------------|---|---|---|---|---|---|
|           | No | Yes | M | SD | n | M | SD | n | 95% CI | t | p | Cohen’s d |
| Number of Perpetrators | 1.452 | .918 | 62 | 1.913 | .917 | 403 | -.707 | -.216 | -3.69 | .000 | .503 |
| Age       | 14.23 | 2.7 | 62 | 12.69 | 4.098 | 399 | .474 | 2.589 | 2.847 | .005 | .444 |

Age

Among the total sample, ages ranged from 2-weeks old to 17-years old (M = 14). Younger children were more likely to have a perpetrator with multiple victims than older children (see Table 6).

Table 6. Results of t-test and Descriptive Statistics for age of alleged child victims by whether the alleged perpetrator had multiple victims

| Variables | Perpetrator Having Multiple Victims | | | | | |
|-----------|----------------------------------|---|---|---|---|---|---|
|           | No | Yes | M | SD | n | M | SD | n | 95% CI | t | p | Cohen’s d |
| Age       | 14.04 | 3.352 | 480 | 12.87 | 3.968 | 270 | -1.744 | .0592 | -3.982 | .000 | .319 |
**Trends**

The current sample of data was collected between the years 2013 and 2017. In more recent cases than in previously reported cases, law enforcement was significantly more involved (see Table 7). Moreover, in more recent cases than previously reported cases, professionals (e.g. social workers, case managers, residential staff) were more likely to report child trafficking than law enforcement and school staff (see Table 8).

</table>
Based on 20 states:

**Who had input?**
- Multidisciplinary Human Trafficking Council/Task Force/Advisory Board (65%)
- Law enforcement (25%)
- Child welfare (20%)
- Service providers (20%)
- Juvenile justice (15%)
- Health care providers (10%)
- Victims/Survivors of trafficking (10%)
- Judges (10%)
- Attorney General’s Office (20%)

**What are your experiences and/or challenges to implementing it?**
- Unpredictability in inconsistent reporting (20%)
- No challenges (15%)
- Length (too short/too long) (15%)
- Having training throughout the state and maintaining the training (15%)
- Language is not inclusive (15%)
- Staff is not utilizing the tool in appropriate situations (10%)
- Not a validated tool (10%)

**Is the same CTSIT used by the Juvenile Justice system in your state?**
- Yes (20%)
- Same tool, different triggers (15%)
- Different tools (15%)
- No, but Juvenile Justice is represented on the task force (10%)
- Not certain (10%)
- No (10%)

**How did state/agency decide on current CTSIT being used?**
- Advisory Council/Work Groups/Task Force gave input and recommendations (65%)
- Members of groups are evaluating currently validated tools based on other tools (20%)
- State has a research partner (15%)
- State developed their own (10%)
The RET administered surveys across all 4 work groups within the SHTTF: Data and Research, Law Enforcement, Prevention and Awareness, and Victim Services. Outlined below are the results of the compiled average scores across the total sample (n = 27).

**Coalition Web-Based Self-Report Questionnaire.** Measuring Community Support for the Statewide Human Trafficking Task Force (SHTTF) and Community Improvement from the Coalition Web-Based Self-Report Questionnaire (CWBSRQ), participants stated their agreement with a series of statements on a scale from “Strongly Disagree” to “Strongly Agree”. The closer the average for each subscale to 5, the greater group member felt the particular domain exhibited aspects of collaboration among the community. Across all SHTTF work groups, average scores on the two subscales (13 items) ranged from 3.04 to 3.39 (see Table 9), which fell under a “Watch Area.”

**7 Commitments Survey.** The 7 Commitments Survey consisted of 35 items for which participants indicated their agreement on a scale from “Strongly Disagree” to “Strongly Agree”. The closer the average for each subscale to 5, the greater group member felt the particular domain exhibited adherence to the 7 commitments of the Sanctuary Model. Across all SHTTF work groups, average scores ranged from 2.80 – 3.65 (see Table 10). All domains fell under a “Watch Area” with the exception of the Social Responsibility domain, which had an average score of just below 3, indicating an “Area of Growth.”

Brainstorming Session Themes

1. What do you think is your individual role as a member of the work group?
   - Bringing information, perspective, and resources into the group and out into the community
   - Policy work
   - Establishing best practices

   “I will be able to bring a unique point of view because I do collaborate with different agencies throughout the state.”

2. How do you hope to contribute to this process?
   - Raise awareness
   - Prevention
   - Policy

   “We realize that human trafficking is really a topic that teachers are on the frontlines to be identifiers but there is a huge lack of awareness”

3. Do you think we have the right individuals at the table? If not, who is missing?
   - Need more breadth of representation statewide and in rural communities
   - Need more disciplines represented

   “We need to add more partners throughout the state...it’s important to come together, especially involving kiddos.”

4. What do you hope the work group will accomplish?
   - Enhance collaboration
   - Enhance coordination across all systems of care
   - Build prevention and training capacity
   - Create consistent response protocol

   “If [professionals] don’t see it as an issue, how many times does somebody in law enforcement see a victim and not know they’re victims?”

5. What are the strengths of the work group?
   - Unique, individual expertise of each group member
   - Having the same common goal

   “That common goal helps us work together and move toward positive change and actually create deliverables.”
Brainstorming Session Themes

6. What does healthy communication look like among work group members?
   - Communication that is respectful, open, consistent, inclusive, and ongoing

   “Another thing that is important is being mindful of inclusiveness and definitely taking heed of hierarchy and placing more value on those around the table.”

9. How can the work group work to take care of each other?
   - Open communication
   - Support and collegiality
   - Celebrate successes
   - Donuts!

   “Promoting self-care, it’s not just about bubble baths and chocolate cake, but it’s about incorporating it into everything we do. Getting to know each other.”

7. What does healthy decision-making look like among work group members?
   - Consensus and/or democratic process
   - Capitalize on expertise of group members

   “It never feels like a dictatorship, everyone is coming to a consensus as best as we can.”

10. What are ways to encourage all member participation in this work group?
    - Practice ongoing and open communication (communicating meeting times, agendas, etc.)
    - Provide alternative opportunities for member input (outline surveys and/or conversations outside of regular meetings)

   “I appreciate that we’re always notified about things. There’s flexibility about what time this meeting would be. I appreciate flexibility.”

8. What is the SHTTF’s role in the state and in the community?
   - Education
   - Awareness
   - Prevention
   - A resource for all things human trafficking

   “I think ideally, the task force is a place where people can go to for answers about human trafficking; resources for advocacy.”

11. What are current gaps or opportunities for improvement for how we are currently reported to child trafficking victims?
    - Lack of coordination across systems
    - Lack of clear, consistent, trauma-informed responses protocol and training/understanding regarding roles of MDT and appropriate responses to HT cases
    - Lack of trauma-informed after-care services

   “There’s a lot of room for improvement in identifying, screening, etc…. If we have a tool that the SHTTF puts forth, that would be so beneficial.”
Policy Recommendations
1. After reviewing our findings from the DCBS cases and our conversations with the workgroups, what recommendations do you have for policy or practice change?

Implement trauma-informed training for all first responders (9)
- Equip first responders to ask the right questions
- Extend training to forensic interviewers
- Extend training to foster parents
- For frontline staff
- In schools, especially rural schools

Create an identification process and offer resources that are inclusive of overlooked populations (4)
- Male victims
- LGBTQ+ victims
- Victims in rural areas

Establish trauma-informed identification and screening processes and trauma-informed after care following identification (4)
- Promote early interaction with victims after identification

Implement an Information Sharing System for the Multidisciplinary Team (MDT) (4)
- Enhance communication regarding victims/potential victims utilizing best practice approaches to victim-centered investigations
- Be intentional about including law enforcement personnel in all MDT work
- Reduce confidentiality barriers to sharing information by enhancing information sharing policies within local agencies as well as across statewide agencies involved in child trafficking investigations.
- Follow trauma-informed, victim-centered optimal practice guidelines when creating and implementing the information sharing agreements and system.

Develop a standardized trauma-informed and victim-centered response to victims of trafficking (3)
- Emphasize the population of runaway and homeless youth

Target college campuses for prevention and awareness (e.g. PEACC at UofL) (2)

Increased use of technology (3)
- Implement screening software to streamline screening and identification processes and allow for screening results to be more efficiently shared with key child abuse investigators (MDT)
- Utilize apps and/or social media to enhance awareness of child trafficking throughout the state
- Provide education and training for the community-at-large regarding risk factors associated with the use of dating apps
- Collaborate with app developers to monitor and flag at-risk activity

Enhance Law Enforcement Involvement (2)
- Partner with law enforcement officials in the development of universal screening and identification tools and protocols
- Emphasize importance of law enforcement involvement in all child trafficking investigations

Address family-controlled trafficking (2)
- Enhance sentences and charges to be inclusive of family members who are engaged in family-controlled trafficking cases
- Utilize evidence-based risk factors to serve families identified as being “at-risk” even when cases are not substantiated (e.g., developmentally appropriate tips sheets)

Broaden training on reporting to the larger community (2)

Refine language around “runaways” to be sensitive to the population (2)

Increase the implementation of a lethality assessment to a regular basis (2)
- Engage law enforcement in implementing lethality assessment
- Engage the larger community to implement lethality assessment

Extend the training and education of the protocol for identifying and screening to the larger community (2)

Address challenges with charging victims of trafficking (2)
- Revise laws to avoid sending trafficked youth to detention
- Revise laws to avoid making nonviolent charges to victims of trafficking that are barriers to survival
2. If you had to prioritize which policy to implement first, what would it be? (“Focus on first”)

Develop a standardized training across all professionals and community members involved in ending human trafficking (5)

- Incorporate this training specifically in the judicial system
- Implement training in teams
- Promote a Multidisciplinary Team (MDT) approach to training and development
- Undertake new DCBS workers to go through training with forensic interviewers

Establish a victim-centered response to approaching victims of trafficking (2)

Address the screening and identification process to promote cross-agency interactions (i.e. from law enforcement to child advocacy centers) and avoid miscommunication involving multiple agencies (2)

Revise the protocol for addressing the at-risk population of runaway and homeless youth (2)

- Develop training specific to the needs of this population

3. What should the overarching or primary message be? What do you want our message to be? What is the big message that you want people to hear?

Establish and clearly define a trauma-informed standard level of care that avoids re-traumatization of child trafficking victims (3)
4. Who should hear this? Who should we share it with?

**Policymakers (9)**
- Chief Justice
- Family courts
- Criminal courts
- Juvenile Justice Advisory Board
- State Interactive Agency Council
- Congress
- Legislation
- Cabinet
- Future bill funders

**Services providers (3)**
- Child Advocacy Centers
- Kentucky Youth Advocates
- CASA volunteers

**Community members (14)**
- Truck drivers
- Janitorial staff
- School bus drivers
- Philanthropists
- Rural community members

Community members could be accessed through:
- Hotline number on the back of sports/event tickets
- Church activities
- Coasters
- Bathroom stalls
- Television commercials, public service announcements, public radio interviews
- Senior centers
- Department of Motor Vehicles
- Billboards
