Legend**percent question responses**Proportion of a specific response (Q_a) to the sum of all responses provided for that question (Q_t). $percent\ of\ total\ question\ responses = Q_a / Q_t$

(Example: X% of all responses to question Y were "A".)

† Percentages are calculated in three different ways. Click on the "Show Extended View" option at the top of the report to display the additional calculations. In cases where a question is required and only one response is allowed, all three percentages will be equal. The difference between the three calculations is most notable in a choose-all-that-apply question type that is optional.

This activity was created to address the professional practice gaps listed below:

- *Clinicians are not using the AARS/AAP clinical practice guidelines for acne, which were published in 2013.*
- *Physicians are not applying the latest information on use of new biologics for psoriasis.*
- *Physicians are not identifying the benefits of emerging treatments such as retinoids, antibiotic/immunomodulatory agents, combination agents, and laser/light techniques for acne and rosacea.*
- *Clinicians are not applying new treatments and approaches to common dermatologic diseases.*
- *Clinicians are not implementing evidence for emerging theories on the pathophysiologies of various types of psoriasis, including treatment plans for appropriate patient selection, screening, and protocols for identifying comorbid conditions.*
- *Dermatologists are not recognizing the benefits and limitations of surgical and nonsurgical techniques as well as topical treatment options for aesthetic dermatology.*
- *Physicians are not properly diagnosing and treating dermatitis.*

Question 1.

Please respond regarding how much you agree or disagree that the gaps listed above were addressed.

Participating in this educational activity changed your **KNOWLEDGE** in the professional practice gaps listed above.

Legend**percent question responses**

Proportion of a specific response (Qa) to the sum of all responses provided for that question (Qt).

percent of total question responses = Qa / Qt

(Example: X% of all responses to question Y were "A".)

† Percentages are calculated in three different ways. Click on the "Show Extended View" option at the top of the report to display the additional calculations. In cases where a question is required and only one response is allowed, all three percentages will be equal. The difference between the three calculations is most notable in a choose-all-that-apply question type that is optional.
