

UNDERSTAND THE ORIGINS AND TREATMENT OF PBC AND PSC

By Attending this Complimentary CME Event

“Improving Diagnostic and Treatment Outcomes of Cholestatic Liver Diseases and Pruritus”

MIAMI, FLORIDA
Tuesday, September 24, 2024

7:00 - 8:00am

This is a **Streaming Online program**.
Log-on information will be sent to you.

Hosted by the University of Miami School of Medicine

Cholestatic Liver Disease causes liver damage and fibrosis owing to bile stasis. It is represented by primary biliary cholangitis (PBC) and primary sclerosing cholangitis (PSC). The pathogenesis of the disease is still unclear, the disease may progress slowly but can progress to liver cirrhosis or liver failure.

The seminar will explore the natural history of PBC and PSC and provide information on the latest drug therapies currently available as well as those under investigation. A special section will focus on the frequent complaint of itching and the management of Cholestatic Pruritus.

This seminar will focus on:

- ▶ The progression of chronic cholestatic disease.
- ▶ Explaining how and why PBC patients are unaware of their disease status for so long.
- ▶ The newest AASLD and EASL diagnostic guidelines and tests for PBC and PSC.
- ▶ Working with patients to better manage Cholestatic Pruritus and the current and future therapies to reduce itch.
- ▶ The long-term approaches to managing PBC and PSC patients.
- ▶ Evaluate the newest PBC therapies in late-stage development and the state of the art in treating Primary Sclerosing Cholangitis

There is no charge for this event, but space is limited and Pre-registration is requested.
