Legend

 **percent question responses**
 Proportion of a specific response (Qa) to the sum of all responses provided for that question (Qt).
 $\text{percent of total question responses} = Qa / Qt$
 (Example: X% of all responses to question Y were "A".)

[†] Percentages are calculated in three different ways. Click on the "Show Extended View" option at the top of the report to display the additional calculations. In cases where a question is required and only one response is allowed, all three percentages will be equal. The difference between the three calculations is most notable in a choose-all-that-apply question type that is optional.
