This activity was created to address the professional practice gaps listed below:

- Distinguish between ADHD and early signs of bipolar disorder in children and adolescents.
- Identify programs which promote positive interactions and future resilience against mental illness
- Treat child and adolescent depression.
- Identify opportunities for advocacy in pediatric mental health.
- Recognize the positive and negative aspects of social media in identifying and treating mental health issues.
- Assess the role of substance abuse programs in healing family relationships.
- Identify increased risk for mental health issues in children in foster care.

1. Please respond regarding how much you agree or disagree that the gaps listed above were addressed.

#### Legend

##### percent question responses

Proportion of a specific response ( $Q_a$ ) to the sum of all responses provided for that question ( $Q_t$ ).

$percent\ of\ total\ question\ responses = Q_a / Q_t$

(Example: X% of all responses to question Y were "A".)

† Percentages are calculated in three different ways. Click on the "Show Extended View" option at the top of the report to display the additional calculations. In cases where a question is required and only one response is allowed, all three percentages will be equal. The difference between the three calculations is most notable in a choose-all-that-apply question type that is optional.

As one of the participants of this educational activity, we want to encourage you to implement those ideas that were appropriate to your healthcare environment. We look forward to seeing you at future University of Louisville events. Thank you very much.

#### Legend

##### percent question responses

Proportion of a specific response ( $Q_a$ ) to the sum of all responses provided for that question ( $Q_t$ ).

$percent\ of\ total\ question\ responses = Q_a / Q_t$

(Example: X% of all responses to question Y were "A".)

† Percentages are calculated in three different ways. Click on the "Show Extended View" option at the top of the report to display the additional calculations. In cases where a question is required and only one response is allowed, all three percentages will be equal. The difference between the three calculations is most notable in a choose-all-that-apply question type that is optional.

Plan for bathroom breaks; announce location of more than the 2stall ladies room. 2.Let speakers advance their own slides. 3.Evaluation form should NOT require people to evaluate speakers whose talks they didn't attend. There were 3 options for the 2 afternoon breakout sessions.
