--	----------------------------

Total Completed: 259

Options: Show Extended View

This activity was created to address the professional practice gaps listed below:

- Distinguishing between acne and rosacea and selecting therapeutic options for women with severe forms of either of these dermatologic conditions.
- Adequately treating women who have psoriasis and are largely unaware of newer options in treating this disorder.
Identifying the best way to treat vulvar diseases and dermatoses of pregnancy.
- Recognizing the structural and physiologic differences unique to aging skin including skin barrier protection.
- Properly selecting treatments for hand dermatitis because its causes are so varied and the hands are constantly being exposed to the eyes, nose, mouth, and other bodily orifices.
- Utilizing current knowledge to prescribe treatments for dermatologic disorders in children.
- Determining the most effective approach best suited to each pediatric patient's history, skin condition, and age and may have difficulty sorting through multiple treatment delivery systems (topical, oral, or combination).
- Applying the proper use of existing therapies and the availability and appropriate use of treatment options in infants and small children.
- Adequately treating pediatric patients who have psoriasis and are largely unaware of newer options in treating this disorder.
- Recognizing various types of vascular disorders.

Legend

 **percent question responses**
Proportion of a specific response (Qa) to the sum of all responses provided for that question (Qq).
 $percent\ of\ total\ question\ responses = Qa / Qq$
(Example: X% of all responses to question Y were "A".)

[†] Percentages are calculated in three different ways. Click on the "Show Extended View" option at the top of the report to display the additional calculations. In cases where a question is required and only one response is allowed, all three percentages will be equal. The difference between the three calculations is most notable in a choose-all-that-apply question type that is optional.

A lot of off-label uses of meds, which I don't really have a problem with. But also a lot of cavalier attitudes about adverse reactions, interactions, black box warnings. Pretty clearly dermatologists are very concerned about having effective treatment for the SKIN PROBLEM and feel successful if patient is compliant and they get a good result of THE SKIN. But the whole patient is still of interest to me, other life factors that influence compliance, how realistic/practical it is to slather yourself with ointment all over your body bid, etc.
