

# Amelia Nordmann

I grew up in Louisville, Ky, the daughter of an artist and a plumber. At age eighteen I relocated to Southern California to complete an undergraduate degree at Pomona College, a small liberal arts college where I dabbled in linguistics and entomology while pursuing a Biology major. Throughout high school and most of college I had imagined a future career as a teacher, but volunteering at a hospital with friends inspired me to devote my efforts to medicine. From the beginning I was drawn to primary care: the complexity of it, the enduring relationships between physician and patient, the opportunity for community involvement. I was delighted to return to Louisville, and be reunited with my family, for medical school at the University of Louisville. During medical school I was fortunate enough to meet my now-fiancé, who swept me off my feet with meteor watching, dates to listen to local musicians, and a trip to the falls of the Ohio for fossil-hunting.

As a medical student I found each rotation intriguing, and loved interacting with patients from all age groups. I am profoundly interested in preventative care and the social determinants of health. Inspired by my own childhood as a patient at the local Family Health Centers, I would like to give back to the Louisville community. I was thrilled to match with the University of Louisville Family Medicine Program for residency. The faculty here are kind and dedicated teachers, and the outpatient clinics are excellent centers of care for members of a complex local population.

When I am not at the hospital or clinic I enjoy cooking, swimming, spending time with family, snuggling with my dog, Brutus and my eighteen year old cat, Sunny, catching a concert, reading novels (especially science fiction.), traveling, yoga, gardening, and sharing brunch or coffee with friends.
