

# Solving the Rubric's Cube

## Mastery Level **Observation** & **Guided Practice**

Like solving a Rubik's cube, we need to plan ahead, adjust, and multitask to ensure key aspects of observation & guided practice shown on the cube fit together in the right combination.

Achieving mastery in CQ3 and CQ4 requires creativity, patience, sequencing, and problem-solving.

Putting in the effort to reach mastery will result in establishing respectful partnerships with caregivers during observation and guided practice that will bolster their competence and confidence to carry out strategies and activities independently between visits.
