

The Department of Pediatrics is happy to announce that Michelle Stevenson, M.D. has accepted a new departmental position within the Division of Clinical and Translational Research as the Director of Pediatrics Research Development. We are very excited about this new role and the added emphasis on promoting more academic activity in our department as we integrate into the new model with Norton Healthcare. As we grow our clinical world, we also hope to grow our research and teaching missions equally and this is a great start. As part of the definitive agreements, we must have an integrated research proposal ready to move forward before going live on March 1, 2020, thus the urgency to making this change.

In her new role, Dr. Stevenson will lead efforts in the Department of Pediatrics to support faculty in developing their research. This will include mentorship with identifying topics of interest and planning a research strategy to address those interests, identifying and applying for research funding, and supporting faculty development offerings focused on building faculty research skills. Dr. Stevenson will work within the Division of Pediatric Clinical and Translational Research on developing new directions for clinical and translational research. She will also continue to serve on the executive committee of the CAHRDS unit (located on the 2nd floor of the KCPC and part of the Division of Clinical and Translational Research), working closely with its director, Dr. Debbie Davis in support of its mission to provide biostatistical expertise, research design and methodological support, and technical support for faculty research.

Michelle Stevenson, M.D.:

- B.S. in Biochemistry from Indiana University, 1993
- Medical Degree from University of Kentucky, 1997
