Sean Ahrens
Chronology

My goal to enable patients to contribute their experience living with their condition to global medical knowledge. I believe new insights to how to cure and treat the world's most poorly understood conditions will come through this form of medical revolution. Power to the patients.

On a technical level, I'm a startup & non-profit founder, user experience designer, and software developer. I am passionate about building technology that can (actually) change the world for the better.

I'm the founder of Crohnology. I built the OpenPPRN. I won PCORI's grand prize in the Matchmaking App Challenge by developing PatientPowered.us.

I'm a 2x Y-Combinator, Rock Health, and UC Berkeley alum.

I studied Computer Science & Business at UC Berkeley, with a focus on Product Design.

I live in San Francisco, California, USA.
