

Malia Fullerton, D.Phil.
University of Washington School of Medicine

Malia Fullerton, D.Phil. is Associate Professor of Bioethics and Humanities at the University of Washington School of Medicine. Dr. Fullerton is also Adjunct Associate Professor in the University of Washington departments of Epidemiology and Genome Sciences, as well as an affiliate investigator with the Public Health Sciences division of the Fred Hutchinson Cancer Research Center. She received a PhD in Human Population Genetics from the University of Oxford and later re-trained in Ethical, Legal, and Social Implications research with a fellowship from the NIH National Human Genome Research Institute. Dr. Fullerton's work focuses on the ethical and social implications of genetic and genomic research, biobanking, and clinical genetic testing, including researcher and participant perspectives on data-sharing, secondary use, result return, and clinical implementation.
